DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or teach an XY coordinate measuring stage with an applied pressure spring urging a friction rod, an applied pressure roller and a motor shaft against one another where a compensation device generates a compensation force against the motor shaft so as to compensate for the applied pressure force in combination with the other features of claim 1.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ohara 6,840,886 B2 discloses in figure 1 a device similar to the prior art devices discussed in applicant's specification. Ohara figure 2 shows Ohara's modification of the prior art device where a force is applied to shaft, but that force is not designed to compensate for the force of an applied pressure spring. Miyake et al. discloses a motor shaft 5 that is surrounded by three rollers 9 and thus has forces acting on the motor shaft from above and below. The rollers are attached to the movable member and act as the friction elements. There is no friction rod in the Miyake et al. device. Dangschat 4,444,069 discloses a friction rod 8, motor shaft 2 and an applied pressure roller 12 but does not disclose a compensation device for opposing the force of the applied pressure roller.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
